

RECALL WIRE

Transform recall management into a competitive advantage

Real-time recall signal monitoring, automated inventory matching, and audit-ready reporting—built for multi-site health systems and enterprises.

Automate • Centralize • Streamline

25–45d

Faster notifications than traditional processing

60%

Reduction in manual recall processing steps

99.9%

Recall signal uptime reliability

The Critical Challenge: Recalls Are Accelerating

2,812+

Medical device recalls in 2025 (as of January 2026)—unprecedented volume

15-Year High

Class I recalls (most serious) at highest level since 2009

- ✗ **Delayed notifications**
FDA processing lags 25–45 days behind real-time manufacturer actions
- ✗ **Fragmented systems**
Multi-site operations lack centralized visibility and coordination
- ✗ **Manual processes**
Time-consuming inventory matching, tracking, and documentation
- ✗ **Compliance risk**
FDA unable to meet termination goals due to resource constraints

The Recall Wire Solution: Built for Scale

Automation

Ingest recalls in real-time, auto-match to your inventory across all sites, and trigger workflows instantly—no manual searching.

Centralization

One command center for multi-site operations with shared visibility, unified tasks, and consistent processes enterprise-wide.

Streamlining

Reduce cycle time with prioritized queues, clear accountability, and instant export of audit-ready compliance reports.

The Recall Wire Solution: Built for Scale

A simple, repeatable workflow for detecting recall signals, targeting impacted inventory and sites, and resolving actions with full traceability.

How Recall Wire Works

Detect

1

Monitor FDA and manufacturer signals continuously. Normalize and enrich recall notices with comprehensive metadata and intelligent categorization.

Target

2

Automatically map recall scope to specific SKUs, lot numbers, and affected sites. Notify the right teams instantly with complete context.

Resolve

3

Track every action end-to-end with complete traceability. Export audit-ready compliance reports instantly for regulatory review.

Results That Matter

25–45d

Faster notifications than traditional methods

99.9%

Recall signal uptime reliability

60%

Fewer manual processing steps

100%

Complete action traceability

Industry Landscape: The Urgency Is Real

3,934

Medical devices recalled from fiscal years 2020–2024 under FDA oversight

11.1%

Device failures now leading cause of recalls—highest rate in 5+ years

3+ Months

FDA couldn't meet recall termination goals due to resource constraints (FY 2020–2024)

200,000

Medical devices monitored by FDA—recalls affect pacemakers, ventilators, surgical tools
