

ONERECALL[®] Enterprise

OneRecall®

Automated, web-based product recall notification, handling, and reporting tool that streamlines the recall workflow, provides assurity of proper recall management and minimizes your organization's risk of exposing patients to recalled products.

Co-Developed
with Johns Hopkins
Health System

15 of the top 20 hospitals
on the Honor Roll on US
News and World Report
use OneRecall®

OneRecall® is being used
in more than 60%
of hospitals

The nation's fastest recall
system, releasing alerts ~27
days earlier than other
industry sources

OneRecall

Alert Content Team

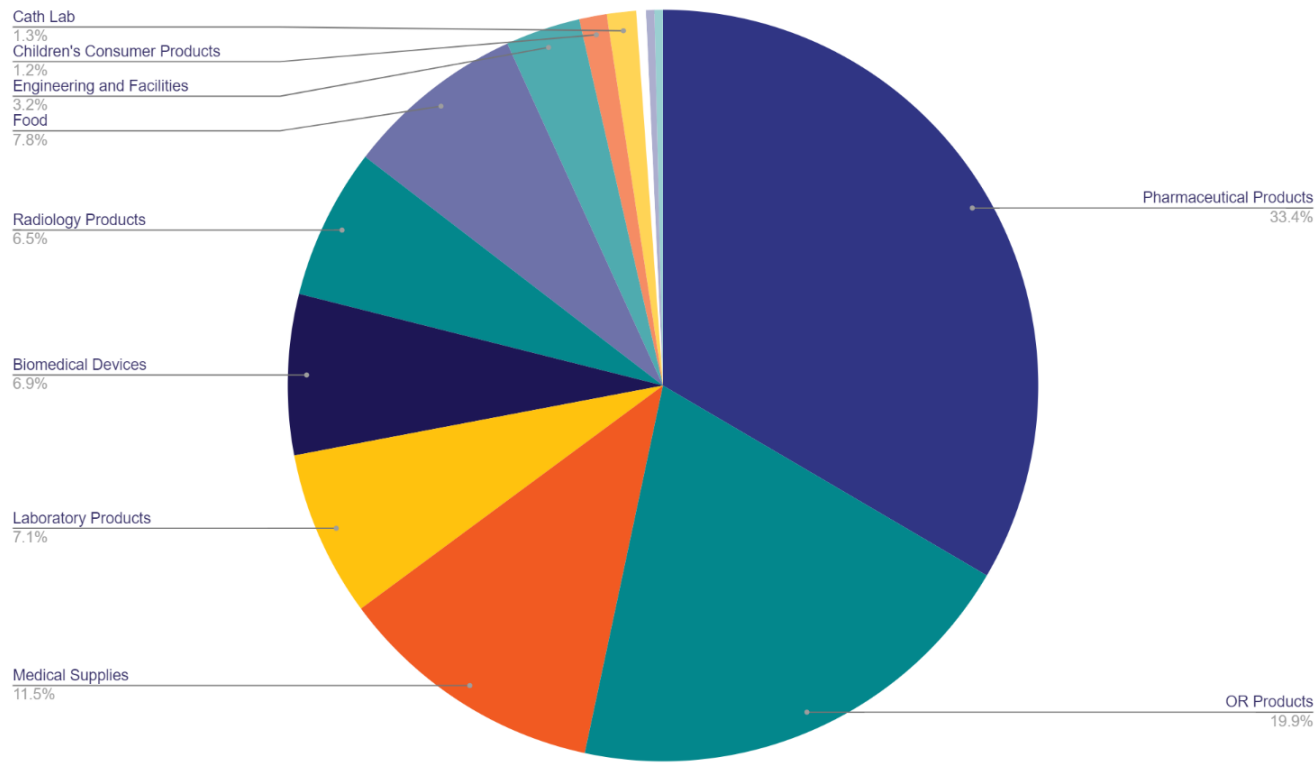

- Alert Content Team consists of dedicated alert analysts to ensure maximum capture of alerts and timeliness of alert delivery.
- **OneRecall** alerts go through a rigorous process of information verification including scope, alert detail and status ensuring our subscribers have the most up-to-date information.
- **OneRecall** alerts are processed within 4-8 hours (alert source verification may extend this timeline)
- Urgent alerts have top priority over standard alerts.
- Direct relationship with manufacturers and wholesalers allows faster delivery of alerts to our subscribers.

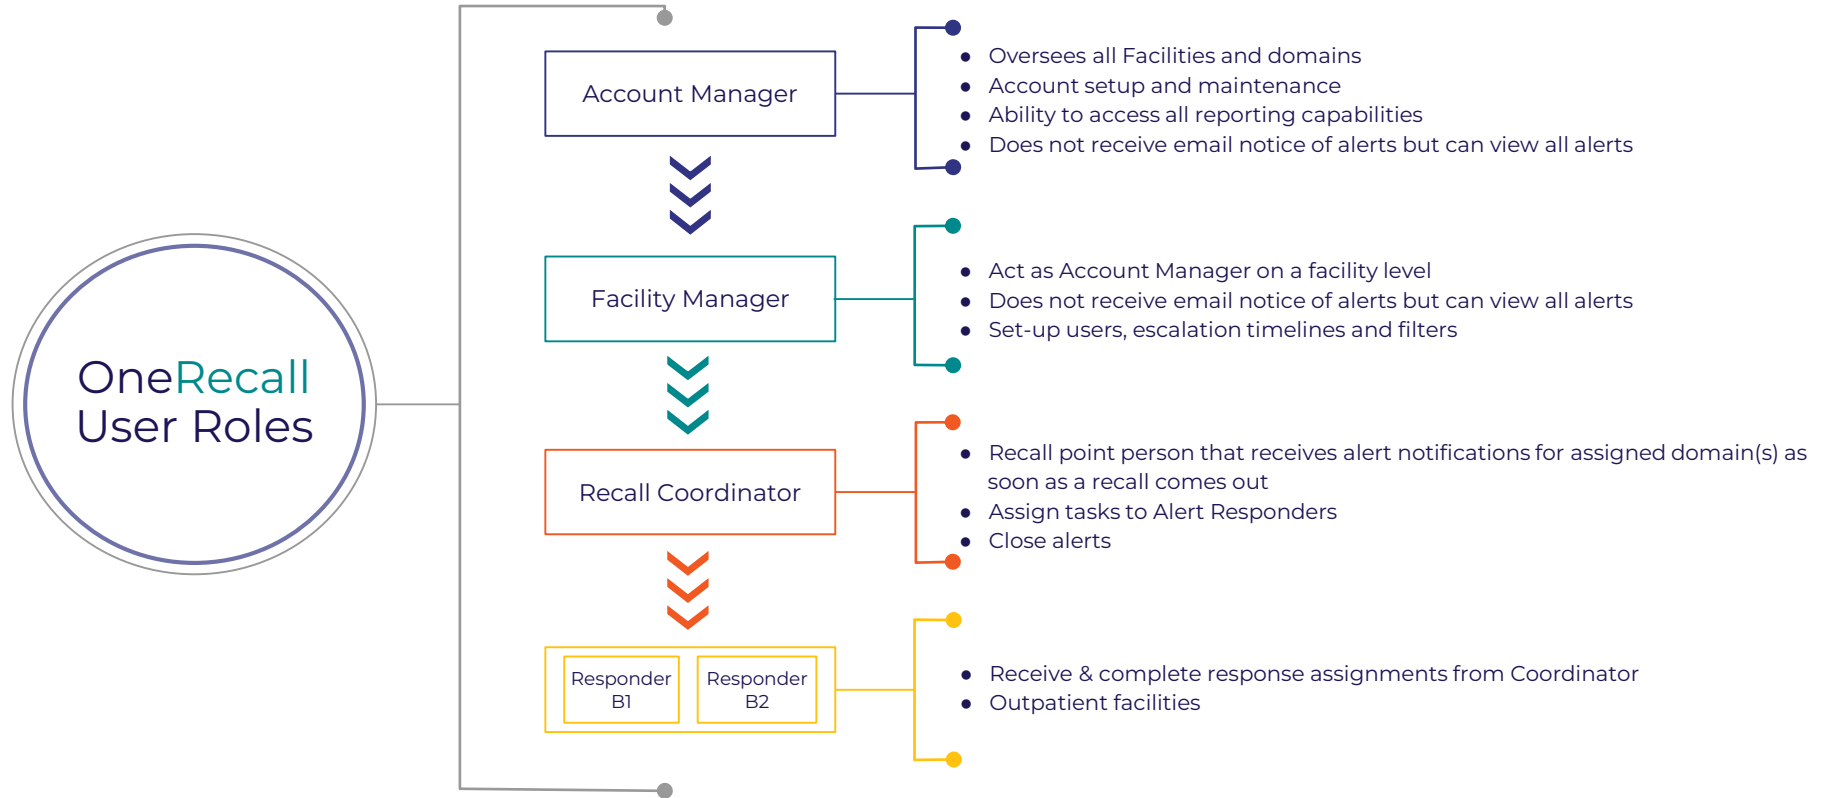

“Using OneRecall as a recall alert notification tool has been instrumental in identifying and responding to recall and alert notices.”

- Johns Hopkins Health System

AI Targeted Alert Feature

- OneRecall incorporates **rapidID** technology which compares a user's purchase history information with each notification released by OneRecall, automatically notifying users when they are affected by recalls
- The improved tool yields accurate history/recall matches through newly developed algorithms, and its efficiency **cuts costs** by removing products from shelves faster
- Processing time is **decreased by up to 80%**, through OneRecall and rapidID, which reduces patient exposure to potentially harmful products and saves lives

“OneRecall gives us a comprehensive view of all of the recalls and alerts. This **insight is invaluable** because it allows us to communicate recall information **consistently and accurately** to our customers throughout our many hospitals and clinics. The system is very easy to use, very reliable, issues recalls and notices in a timely manner. Our **support is excellent!** The system works perfectly for our needs!”

BJC Healthcare

OneRecall Gives You The Tools You Need

Real-Time, Standardized Alerts

Receive immediate recall notifications from all sources, ensuring faster action—**27 days sooner** than industry average

Advanced Filtering & Noise Reduction

Layered recall updates and product matching eliminate irrelevant alerts, improving focus and accuracy

Automation & AI Targeted Alerts

Built-in automation **boosts efficiency by up to 80%**, reducing manual workloads

Scalable & Customized

Flexible for any institution size with personalized support

Compliance & Safety

Oversight for recall compliance, prompt removal, and enhanced safety for patients and staff

Seamless Integration

Connect seamlessly with Inmar solutions such as Rx Returns, MedEx TraySafe, and RxTransparent for streamlined workflows and enhanced insights

Most Hospitals Are Not Fully Prepared For A Recall

Enacting recalls is difficult, time consuming, and has the potential for liability during and after the recall event.

Hospitals often struggle to effectively receive and act on recall information due to excessive noise and a lack of individualized data, resulting in information overload and missed critical recall details.

Our Hospital partners experience improvements in efficiency, preparedness, and a lower impact to overall business operations with Inmar's OneRecall solution.
