

Case Study

Demonstrating Best Practices to the Joint Commission using NotiSphere for Recall Management

Objectives

Corporate visibility to recall information while enabling sites to manage activities and responses independently

- Visibility to **all notifications and responses** across all sites
- **Formalize process** and broaden participation across organization

Recall Process

9 hospital Sites operate independently, receiving paper notifications and responding to suppliers from each site

Developed and documented workflow process integrating NotiSphere as a central repository

Each user participated in a 1-hour training session

Impact

- **Successful** demonstration of internal recall management processes and procedures to the **Joint Commission** and Baptist Risk Team
- Using the NotiSphere platform and process framework, the Recall Coordinator was able to professionally and confidently respond to TJC and the Baptist Health Risk Team's questions
- **Organizational visibility** to all recall activity
- Ability to **easily communicate** across organization about product notifications.

*"The Joint Commission arrived this week to conduct a survey in several specialty departments. They asked to see our policies and procedures related to recall management. I had only minutes to prepare, but I had the procedure and workflow diagrams we developed during implementation with the NotiSphere team and used these to describe our processes for paper recalls. I also had the information within the NotiSphere platform for these recalls readily available. TJC and BH Risk Management were **IMPRESSED** with our recall software and my presentation!! Kudos to Notisphere!!"*
