Leverage the *Integrate-Once Network* to Accelerate End-to-End Supply Chain Digitalization Across Your Business and Trade Partner Relationships

SERIALIZATION & TRACEABILITY

- Interoperable connectivity with more than 290,000 authenticated Healthcare & Life Sciences entities globally
- Revolutionary *B2N Integrate-Once* model eliminates P2P integrations and maximizes partner activity
- Massive data scaling with 100B+ serial numbers provisioned/traced

REGULATORY COMPLIANCE

- Protect pharmaceutical revenue for 40+ countries and counting
- Support HLS manufacturers in all global markets with traceability and regulatory requirements
- Low-code development framework to meet demands of continuously evolving compliance regulations

MULTI-ENTERPRISE INFORMATION NETWORK TOWER

- Exchange data for POs, Invoices, ASNs, Production, Inventory, and more
- Eliminate point-to-point B2B connections through proven *B2N Integrate-Once* model
- Support any transaction and file type requirements to drive partner-friendly usage and engagement

SUPPLY CHAIN WORK MANAGEMENT

- Collaborate across enterprise systems and company boundaries using pre-built supply chain process templates
- Manage issues, changes, tasks, and documents interoperably, contextualized by MINT data
- Increase visibility to achieve goals for OTIF, fill rates, COGS, and more

PRODUCT AVAILABILITY INTELLIGENCE

- Predict drug shortages 90 days in advance with 90%+ accuracy
- Contributory data asset only possible based on *B2N Integrate-Once* network capability
- Directly grow and protect revenue, ensure OTIF, and enhance patient experience

DIGITAL RECALLS

- Digitalize paper-based recall notification and withdrawal process
- Syndicate digital recall messages to 290,000+ downstream healthcare partners immediately
- Match serialized product information with recalled product to ensure patient safety and business process efficiency

CELL & GENE THERAPY ORCHESTRATION

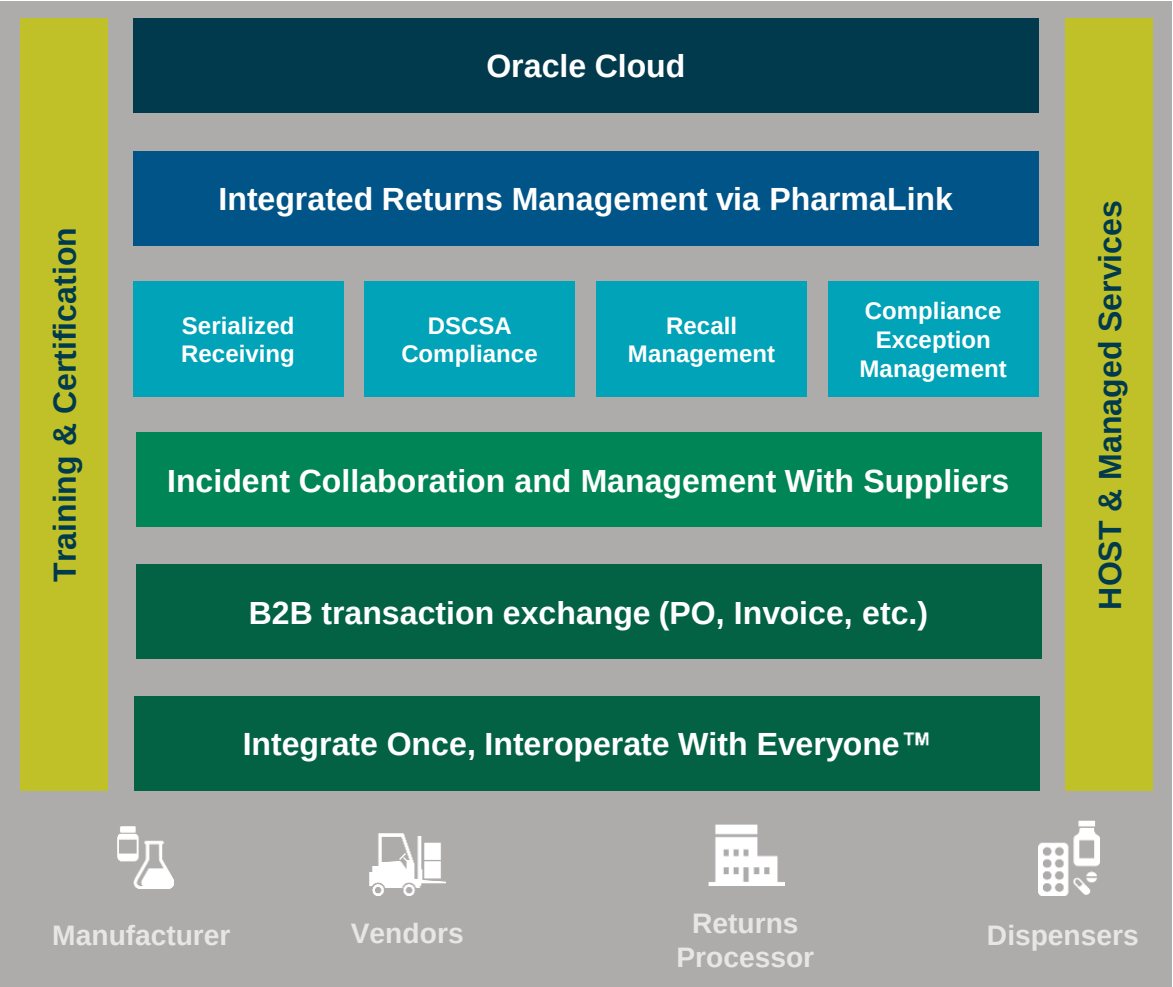

- Orchestrate the patient and cell journey across a complex ecosystem of C&G stakeholders
- Leverage authenticated network of 290,000+ HLS entities
- Use Opus platform APIs to quickly integrate with partners for distribution, cold chain, and more

SOLUTION DESIGNER

- No-code customization of solutions by business users to meet unique needs quickly and cost-effectively
- Maintain interoperability with all partners even with customization
- Modify user experiences, data objects, workflows, and other UI components to meet the needs of each organization

Integrated Systems in a Connected Supply Chain

Ingrate Once, Interoperate With Everyone™

Onboard and integrate with direct and indirect suppliers across multiple transactions

MINT

Replace EDI and point-to-point integrations across multiple business transactions (i.e., PO, Invoice, etc.)

Supply Chain Work Management

Collaborate and enforce standard workflows for supply incidents, including compliance exceptions and recall management.

DSCSA Compliance

Comply with DSCSA while enabling more value-added services.

Digital Recalls

Digital recall notifications and recall work management.

Pharmacy Returns Management*

Facilitate returns processing with clear transparency to rebate credits.

Managed Services

White-glove service to address exceptions, supplier onboarding, user management, etc.

Training and Certification

Online and in-person training, classes, and certifications.

Digital Recalls

View digitalized recall notifications, acknowledge and provide location-level inventory responses, track effectiveness across the organization, and maintain a digital audit trail.

Key Capabilities

- Real-time recall notifications in an easy-to-understand digital format
- Orchestrated workflow across sites for recall acknowledgment, response gathering, monitoring, and collaboration
- Digital audit trail to prove adherence to recall response plan and support regulatory compliance
- Integration with DSCSA Compliance Track & Trace solution to create targeted recalls; receive recall notification only for products the organization has purchased
- Dashboards for simple, comprehensive ability to monitor by product, progress, and sites

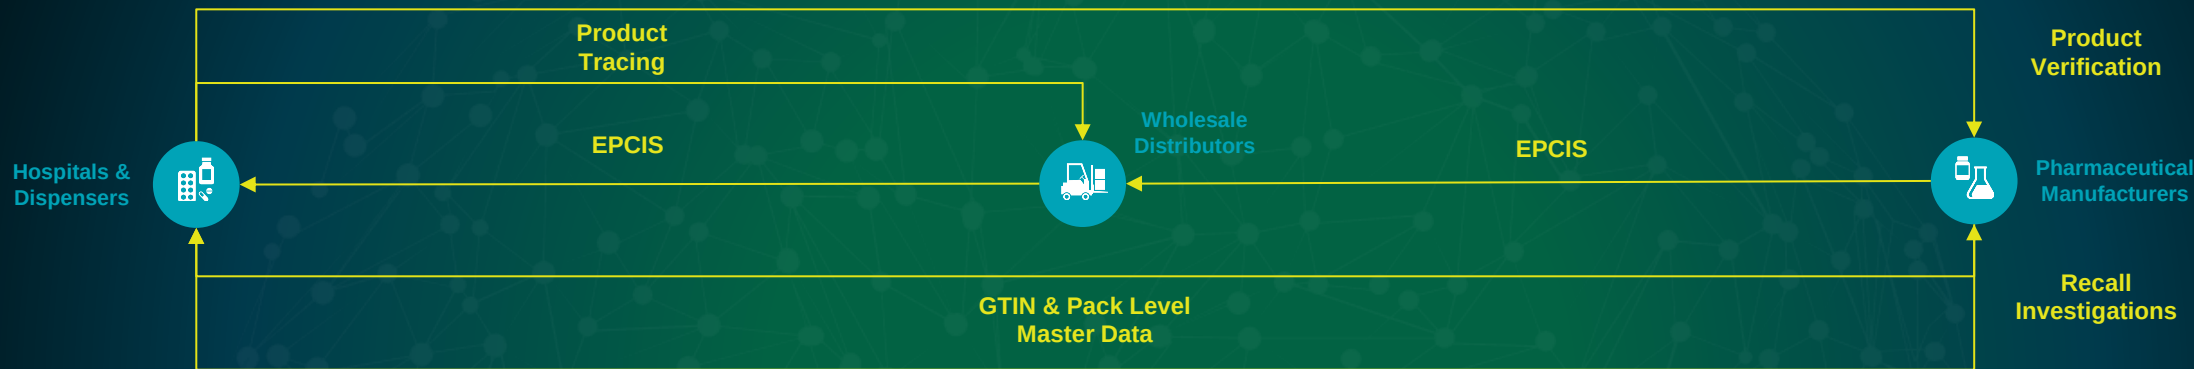

Customer Benefits

- Free up skilled pharmacy staff so they can focus on patient care
- Increase patient safety by removing opportunities for human error
- Decrease costs associated with managing a recall
- Expedite recall response and product removal from inventory and faster reimbursements

Mount Sinai Digital Recalls Proposal

Products	Annual Subscription Fee	
Digital Recalls Oracle Cloud Integration Engine API End to End HOST Support	100 Users	\$38,195
	150 Users	\$51,695
	200 Users	\$63,422
	215 Users	\$67,337
Implementation	SOW Estimate	
One-time Implementation Fee	\$4,000	
● Pricing valid through December 31st, 2024 ● Based on 3-year subscription term and Net 30 payment terms ● \$300 per additional licensed user ● Installation, Training, and Support are included in the annual subscription & implementation fees.		

Network: DSCSA is a network challenge requiring pharmacy integration with wholesalers and pharmaceutical companies

EPCIS Transaction Exchange	Exchange EPCIS transactions with suppliers, supporting various B2B configurations and transaction formats
Suspect & Illegitimate Product Verification	Verify a product’s identity and status against the manufacturer’s system of record
Product Tracing	Request and receive compliance information from wholesalers and manufacturers on demand
Recall Status, Investigations, Alerting	Initiate or participate in a trace request in response to a recall investigations
GTIN and Pack Level Master Data Acquisition	Source GTIN and pack level master data – new data elements to support serialization – from the manufacturer

PHARMACY IMPACT: TraceLink’s network architecture reduces supplier integrations to one and eliminates the cost and risk associated with point to point integrations.

Thank You.
