

The most advanced standards-compliant traceability platform in the world

✓ for **Producers** ✓ for **Manufacturers** ✓ for **Distributors** ✓ for **Retailers**

TrackVision AI is the SaaS platform that captures and shares supply chain traceability data using GS1 EPCIS 2.0 and Digital Link standards, powering applications to support your compliance, sustainability, quality and transparency goals. TrackVision AI is massively scalable, fast, and secure; and runs on any public or private cloud, at low cost.

Product digitisation and traceability with TrackVision AI

Business problems we solve

Regulatory Compliance

Capture and share the traceability data required for compliance with various regulations such as FSMA, DSCSA and DPP

Provenance Assurance

Monitor and track provenance of products & ingredients, and share valid claims with consumers and business partners

Certification Assurance

Monitor certifications of product and ingredient manufacturers. Ensure ESG compliance and make verifiable claims

Rapid Recall Execution

Execute rapid and targeted product withdrawals during safety or quality incidents, saving costs and limiting impact

Carbon Reduction

Calculate scope 3 carbon footprints for products to identify and improve the highest emitting sections of a supply chain

Waste Reduction

Track expiry dates of inventory to measure the effectiveness of "first expiring, first out" processes and improve them

Diversion Detection

Track the intended market of each item. Detect out of sector products and address the diversion problem with the distributor responsible

Cold Chain Assurance

Blend distribution and sensor data to monitor and ensure compliance with cold chain requirements

Platform Capabilities

Create digital twins with unique identities

Create uniquely identifiable digital twins for items, lots and logistic units at scale based on GS1 Digital Link. Track state and properties of each digital twin, as well as relationships to other supply chain entities such as manufacturing location or packing hierarchy.

Web-enable your products

Put GS1 Digital Link QR codes on products and logistics units, or use other carriers like NFC and RFID. Configure redirection rules so users are sent to the most appropriate landing pages depending on what they are scanning and where they are. View QR scan statistics on dashboards.

Capture traceability data

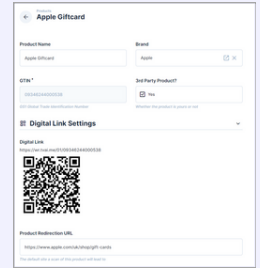

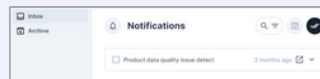

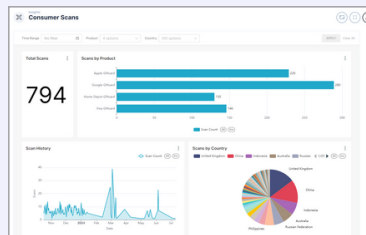

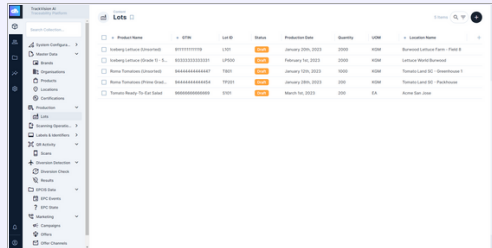

Ingest traceability data via your preferred mechanism: user interface, spreadsheet upload, scanning, EPCIS API or integrate directly with existing IT systems such as ERPs, warehouse management systems and manufacturing systems using our enterprise integration toolkit.

Share traceability data

Setup ongoing electronic traceability data flows with your business partners with just a few clicks with GS1 EPCIS 2.0 or GS1 EDI. Or export data with easy to use query and spreadsheet downloads.

Monitor and analyse with AI

Use our built-in dashboards or our AI chat interface to trace ingredients and distribution, investigate diversion issues, measure carbon footprints and more. Configure custom dashboards with ease. Use AI and no-code workflow tools to be notified of anomalies and problems.

Built on the latest Industry Standards

TrackVision AI has been built from the ground up to help you seamlessly leverage the latest industry standards from GS1 for data traceability and digitally enabled barcoding. Avoid lock-in and ensure scalability through interoperability with TrackVision's built in support for the most widely used set of standards used in global supply chain and retail.

GS1 EPCIS 2.0

- The best open standard for item or batch-level traceability
- Models any supply chain process in any industry
- Provides standard APIs and data definitions for supply chain events

GS1 Digital Link

- 2D barcodes that are also web-addresses
- Digitally enables every supply chain entity: Products, Batches, Units, Containers
- Links the physical and digital worlds
