

Urgent Medical Device Recall from Medline Industries, LP

Medline has identified issues related to calibration of the equipment used to sterilize and package the devices. All products were exposed to the validated sterilization and packaging cycles; however, the identified calibration issues have the potential to impact the sterility assurance level (SAL) of the Recalled Products. This creates the potential for a non-sterile device to be placed within the sterile field, or a non-sterile device to be used within a sterile procedure. This could lead to contamination of a sterile field and/or potential for patient infection to occur. Medline has received no reports of infection or other defects related to the sterility of the Recalled Products. The Recalled Products are to be destroyed. Be advised that there may be item number variations based on the unit of measure ordered by your facility, indicated by an H appended to the item number(s) included with this communication. Note, there is no product difference between variations in units of measure, and physical labeling will reflect the base item number (i.e. DYNJP2002S). Refer to the attached guide for instructions on identifying lot numbers

Note: If you are a distributor, or have resold or transferred this product to another company or individual, you are required by FDA regulations to notify them of this recall communication. Please request that customers destroy any affected product. You should include your customers' quantities on your response form.

Recall Ref : R-26-003

Jan 6, 2026

MEDLINE INDUSTRIES, LP

PROXIMA STERILE SURGICAL GOWNS, PACKS, AND DRAPES

Status : Open

Please review the instructions below and submit your response(s) to Medline.

What do you need to do?

Please follow the instructions below:

1

Check Your Inventory

Check your stock for the affected item number and affected lot numbers

2

Submit Your Response

Complete and submit the following information to Medline
